

AI Recommendation Report

Farm: Gatenga Demonstration Plot
Farmer: Rodrigue Farmer
Crop: Maize
Region: Gatenga Sector, Kicukiro District, Kigali City
Generated: 2026-07-11

Increase irrigation support for Maize

Category: irrigation Priority: Critical Confidence: 96%
Status: Generated Created: 2026-07-11

Problem Detected:

Moisture gap emerging during flowering.

Recommended Action:

Increase irrigation volume by 41% and shift watering to early morning.

Explanation:

Rainfall remains below the comfort threshold and evapotranspiration pressure is increasing on Gatenga Demonstration Plot.

Expected Outcome:

Reduced moisture stress and stronger yield stability over the next 7 days.

Correct nutrient balance before yield loss expands

Category: soil Priority: High Confidence: 90%
Status: Pending Review Created: 2026-07-11

Problem Detected:

Nutrient imbalance detected for Maize.

Recommended Action:

Apply a staged nutrient correction focused on balanced NPK within the next 5 days.

Explanation:

The nutrient profile suggests field nutrient balance remains moderate and should still be monitored. which can reduce crop vigor under current field demand.

Expected Outcome:

Higher nutrient efficiency and improved crop stability before the next production stage.

Escalate scouting for moderate pest pressure

Category: pests Priority: Medium Confidence: 78%
Status: Generated Created: 2026-07-11

Problem Detected:

Recent diagnosis suggests Late Blight should be watched closely.

Recommended Action:

Scout the field within 48 hours, inspect leaf undersides and crop whorls, and prepare targeted intervention if thresholds are reached.

Explanation:

Weather-linked pest intelligence indicates that maize blocks in Gatenga Sector, Kicukiro District, Kigali City need closer scouting and faster field response.

Expected Outcome:

Earlier containment and lower economic risk before infestation expands.

Align harvest and selling strategy with current market movement

Category: market Priority: Medium Confidence: 80%
Status: Generated Created: 2026-07-11

Problem Detected:

Market signal indicates stable pricing momentum for Maize.

Recommended Action:

Sell in phased volumes while monitoring the next market refresh.

Explanation:

Kicukiro New Modern Market currently offers the strongest score with good access and price. This should influence how you time harvest preparation and post-harvest handling.

Expected Outcome:

Better selling decision and improved revenue capture from current demand conditions.

Apply crop-stage management advisory for Maize

Category: crop Priority: High Confidence: 89%
Status: Generated Created: 2026-07-11

Problem Detected:

Maize is in flowering, requiring tighter management synchronization.

Recommended Action:

Follow a stage-based task schedule this week and confirm completion against the advisory tracker.

Explanation:

Extension officers in Gatenga are validating moisture-conservation and fertilizer-split practices.

Expected Outcome:

Improved coordination between soil, irrigation, pest, and market decisions.
